Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12 and 29-31, drawn to a device for inspecting the interior of metal tubes comprising a source of light, means for focusing the light source onto the interior surface of the tube, a detector for detecting light focusing on the interior of the tube, means for centering the light source, detector in the center of the tube, and means for moving the detector, source and centering means through the detector tube, classified in class 356, subclass 241.1.
 - II. Claims 13-21, drawn to a method for processing a signal that includes x, y, and intensity data sets for each pixel of the sensor from an image sensor, classified in class 382, subclass 260.
 - III. Claims 22-28, drawn to a method for determining the radius of a tube, classified in class 356, subclass 635.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the patentability of the combination does not rely on the details of the subcombination. The subcombination

Art Unit: 2877

has separate utility such as a displacement measuring device, position measuring device, etc....

3. Inventions II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the Patentability of the combination does not rely on the details of the subcombination. The subcombination has separate utility such as a surface profiler in a lithography tool.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and III, also the search required for Group II is not required for Group II, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Don Mollick on 9/13/02 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

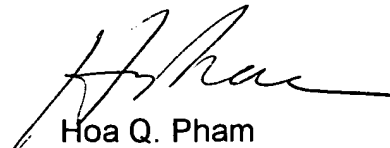

Art Unit: 2877

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
